AI is not working

Chat History is not working

No features on "ask the brain" work

Notifications show 7 on both page and sidebar (BOTH WRONG), when clicking tab it shows 0

In week view you do not see all appointments for the day

Schedule needs to be changed from 9-6 to 10-7

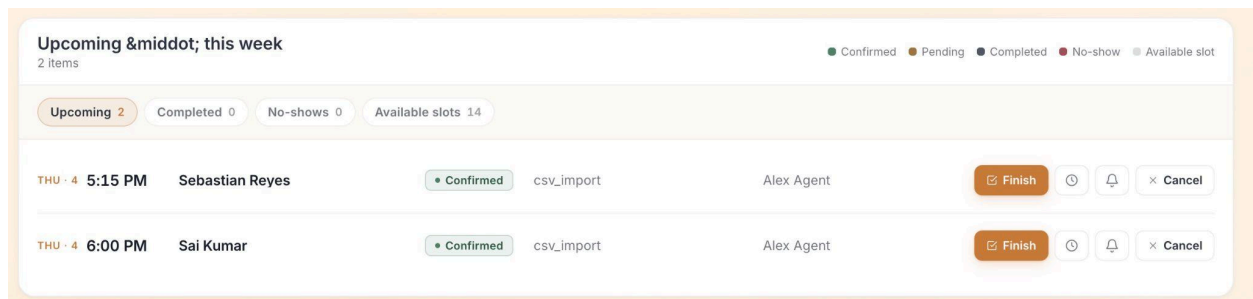

Preset for schedule should be day view

Appointments tab has:

"2 appointments · today"

"Upcoming · this week"

Neither are proper English

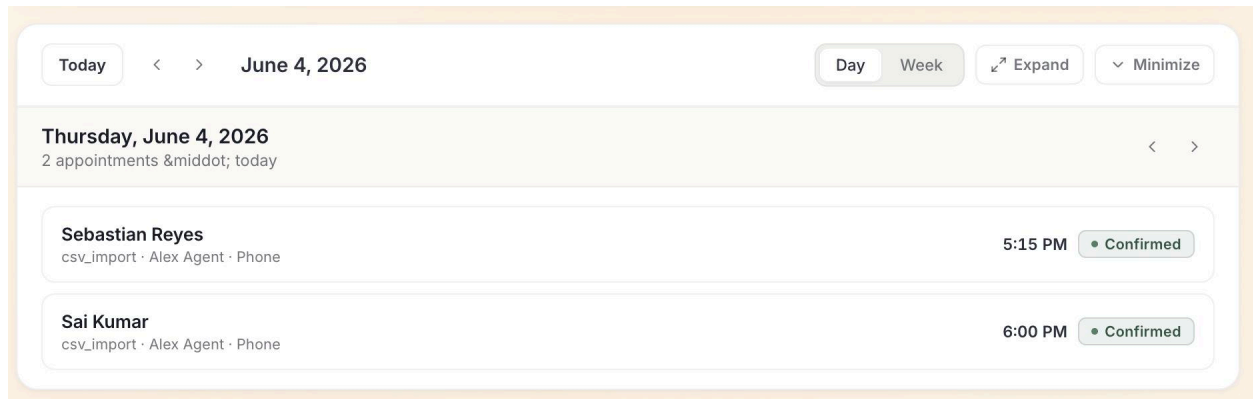

"Today" Tab should be removed and then it should be "June 4, 2026 (Today)"

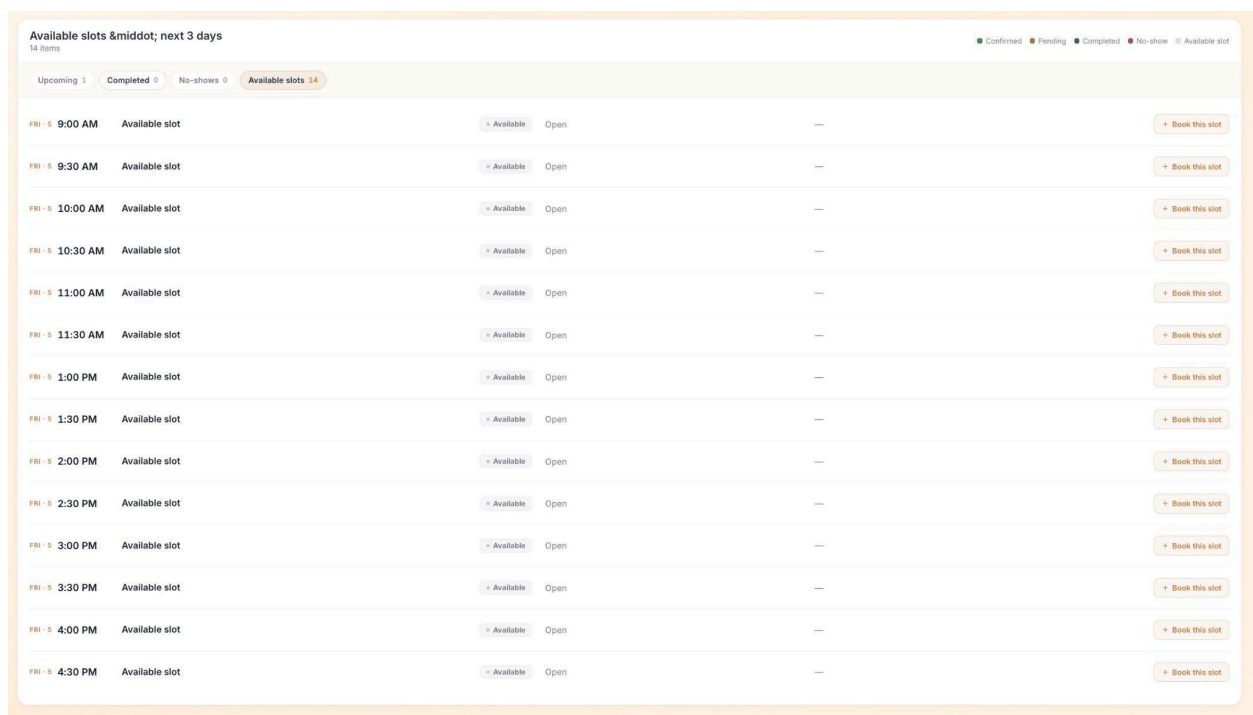

Minimize tab should be removed

<> next to June 4th repeat twice, we should remove the <> in the Thursday June 4th Beige box (the tan one)

Add Appointment button should be made for appointments which need to be added manually by agent

This should be removed. When you click an appointment from the tab above. It should show a the respective appointment details and the options for the agent. Allowing the agent to Finish appointment, reschedule (text must be sent to client regarding the reschedule), reminder button needs to work (no message is being sent)

Why does this show the next 3 days? It should not show the next 3 days but the current day and then calendar toggle to schedule for some time in the future (Never past).

Does this respect timezone? If so what timezone is it in?

Time is wrong, agents work 10AM - 7PM not 9 AM to 4:30 PM. Also the currently booked appointments to not effect this schedule which will cause double bookings.

This assumes an appointment is 30 minutes, its not.

Book this slot does not work.

Search appointments...

How does this work? After this is dental vision and care insurance available? We need to log Dental vision sales on both this portal and the dental vision portal. How will we submit the deal twice without having the agent do it twice?

We can't have Dummy Info on the live dashboard. We need the real info.

All of these buttons are either wrong or don't work. Extraction confidence should be removed.
No — should be there

Why does the agent see texts? They should only see the text of the people they have appointments with. And they should not be able to see any of full chat history that the ai does, because that is private and proprietary information.

None of these work
